

## Internally Transportable Vehicle

### Description

The Internally Transportable Vehicle (ITV) will be a highly mobile weapons-capable light strike platform that can support a variety of operations. It will provide MAGTF ground combat units with a vehicle that is internally transportable in CH-53 and MV-22 aircraft. It also will provide reconnaissance units equal or greater mobility than the Marine Air-Ground Task Force MAGTF maneuver elements they support, thereby enhancing their mission performance and survivability. This is a joint program with U. S. Special Operations Command; the Marine Corps is the lead service.

### Operational Impact

The ITV will play a key role in Ship To Objective Maneuver, allowing MAGTF commanders to take maximum advantage of the speed and range offered by the MV-22 and CH-53 by deploying ground units equipped with highly mobile light-strike vehicles armed with heavy or medium machine guns. The Interim Fast Attack Vehicle is currently fielded and is deployable inside the CH-53 aircraft, but the GCE currently has no ground mobility platform that can deploy inside the MV-22.

### Program Status

The ITV Program is in the System Development and Demonstration Phase. A Request For Proposals was published in February 2004, with a contract awarded to General Dynamics Ordnance and Tactical Systems in November 2004. Initial operational capability is scheduled for January 2007, when one infantry battalion receives eight ITVs.

<b>Procurement Profile:</b>	FY 05	FY 06
<b>Quantity</b> (Prototypes):	4	8
<b>Developer/Manufacturer:</b>	American Growler, Ocala, FL
